

DIVYAM NAVIN

Full-Stack Developer | Applied AI / ML

Thane, Maharashtra | +91 77381 27675 | divyamnavin@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Information Technology undergraduate and full-stack developer with hands-on experience building and deploying production-grade web applications (React.js, Node.js, Express, MongoDB) and applied AI/ML systems spanning LLM-based automation, multimodal prediction, and computer vision. Comfortable working across the entire stack, from frontend and backend engineering to data pipelines and model experimentation, with a track record of shipping real systems across internships, competitions, and production projects.

EDUCATION

B.Tech in Information Technology, Fr. C. Rodrigues Institute of Technology <i>Vashi, Navi Mumbai CGPA: 9.5 (Year 1), 9.74 (Year 2)</i>	2023 - 2027
HSC (Science), V.G. Vaze College of Science, Commerce and Arts <i>MHT-CET: 97.5 percentile</i>	2021 - 2023

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, HTML5, CSS3
Frontend	React.js, Responsive Design, UI/UX
Backend	Node.js, Express.js, REST APIs
Databases	MongoDB, MySQL, NoSQL
AI / ML	Prompt Engineering, LLM Integration (Gemini API), Data Collection and Cleaning, Multimodal Modeling, CNNs / Deep Learning, pandas, NumPy, scikit-learn
Tools & Cloud	Git/GitHub, Cloudflare Workers, Vercel, Railway, Render
Concepts	Full-Stack Development, API Integration, Data Preprocessing, Cryptography Fundamentals, SEO

EXPERIENCE

AI / Data Intern, Education Domain <i>ZetaQ (zetaq.in)</i>	Jan - Feb 2026
- Built an automated content-processing pipeline that programmatically collected NCERT subject PDFs across multiple standards and routed them through an LLM (Gemini) using structured prompt engineering to extract text and identify key formulas, topics, and concepts. - Designed prompts to classify and structure the extracted content, generating clean, organized study-material PDFs and cutting down on manual content preparation for the platform.	
Full-Stack Web Development Intern <i>Thinking Engines</i>	2025
- Handled both the frontend and backend of a company website (React.js, Node.js), taking it from design through to deployment. - Built responsive interfaces and the supporting server-side logic for the full site.	
IT Engineer Intern <i>Arms Robotics</i>	Jun - Jul 2025
- Built and deployed the company website (Wave Habitat), integrating real-time hardware-software data flow. - Engineered a streamlined system architecture for hardware-software interaction that substantially improved data-processing efficiency. - Supported deployment and testing of production-ready solutions.	

- Web Development Intern**
VanillaKart

2024 - 2025

 - Developed and optimized frontend and backend components for live web projects (HTML, CSS, JavaScript, Node.js).
 - Increased organic search traffic by around 20% by producing 100+ SEO-optimized product descriptions and 30+ blog posts, improving keyword rankings.
- Digital Marketing Intern**
Finnfluent Education

Jan - Feb 2025

 - Produced 15+ social media creatives and 5+ PR articles, and generated 15+ qualified leads through organic campaigns and competitor analysis, lifting brand visibility around 12% within a month.
- Startup Coordinator and Secretary**
E-Cell, FCRIIT

2025 - 2026

 - Co-organized flagship entrepreneurship events (Spark-A-Thon, E-Summit 2025 and 2026), led communication, documentation, and team coordination, and mentored early-stage startup ideas.

PROJECTS

- Multimodal Stock Market Prediction System**
Personal Project (in progress)

2025 - Present

 - Building a near real-time market analysis system that combines technical indicators, news and sentiment signals, and fundamentals to generate directional predictions and buy/sell guidance.
 - Reaches around 60 to 62% directional accuracy on short-term (roughly one month) horizons, built in Python with an ensemble prediction layer over engineered multimodal features.
- Image-to-Biomass Estimation**
CSIRO Problem Statement

2025

 - Developed a multimodal model that combines tabular features with a CNN over imagery to predict vegetation biomass, and also predicted NDVI directly from the imagery.
 - Built the full pipeline covering preprocessing, modeling, and evaluation, and applied regularization to reduce overfitting on a limited dataset.
- EduSage, AI-Assisted Education Management Platform**
Academic Project

2024 - 2025

 - Architected a full-stack education platform (React.js, Node.js, MongoDB) to streamline academic workflows.
 - Integrated an LLM-powered module (Gemini API and prompt engineering) into the interview and quiz process for a more intuitive, responsive experience.
- Wave Habitat, Real-Time Hardware Monitoring System**
Arms Robotics

2025

 - Built a real-time monitoring dashboard (Node.js and API integration) that bridges embedded hardware with a web interface for live data interaction.
 - Implemented scalable backend logic to handle high-frequency data streams from embedded systems, reducing manual troubleshooting time.
- Portfolio Website**
portfolio-dn-mocha.vercel.app

2025

 - Designed and deployed a high-performance personal portfolio (React.js, Node.js, Express, Cloudflare Workers) with a responsive UI and high availability.

AWARDS AND ACHIEVEMENTS

- Received multiple Letters of Recommendation for technical, academic, and strategic contributions.
- Ranked among the top performers in the Information Technology branch.
