

DIVYAM NAVIN

Full-Stack Developer | Applied AI / ML
Thane, Maharashtra | +91 77381 27675 | divyamnavin@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Information Technology undergraduate and full-stack developer with hands-on experience building and deploying production web applications (React.js, Node.js, Express, MongoDB) and applied AI/ML systems across LLM automation, multimodal prediction, and computer vision. Comfortable across the full stack, from frontend and backend engineering to data pipelines and model experimentation.

EDUCATION

B.Tech in Information Technology, Fr. C. Rodrigues Institute of Technology Vashi, Navi Mumbai CGPA: 9.5 (Year 1), 9.74 (Year 2)	2023 - 2027
HSC (Science), V.G. Vaze College of Science, Commerce and Arts MHT-CET: 97.5 percentile	2021 - 2023

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, HTML5, CSS3
Web	React.js, Node.js, Express.js, REST APIs, Responsive UI/UX
AI / ML	Prompt Engineering, LLM Integration (Gemini API), Data Collection & Cleaning, Multimodal Modeling, CNNs / Deep Learning, pandas, NumPy, scikit-learn
Data & Tools	MongoDB, MySQL, Git/GitHub, Cloudflare Workers, Vercel, Railway, Render

EXPERIENCE

AI / Data Intern, Education Domain ZetaQ (zetaq.in)	Jan - Feb 2026
Built an automated content-processing pipeline that collected NCERT subject PDFs and routed them through an LLM (Gemini) with structured prompt engineering to extract text, identify key formulas and topics, and classify content into clean, organized study-material PDFs.	
Full-Stack Web Development Intern Thinking Engines	2025
Built both the frontend and backend of a company website (React.js, Node.js), taking it from design through deployment with responsive interfaces and supporting server-side logic.	
IT Engineer Intern Arms Robotics	Jun - Jul 2025
Built and deployed the company website (Wave Habitat) and engineered a real-time architecture bridging embedded hardware with a web dashboard, handling high-frequency data streams and improving data-processing efficiency.	

PROJECTS

Multimodal Stock Market Prediction System Personal Project (in progress)	2025 - Present
Building a near real-time system that combines technical indicators, news and sentiment signals, and fundamentals to generate directional predictions and buy/sell guidance; reaches around 60 to 62% directional accuracy on short-term horizons, built in Python with an ensemble layer over multimodal features.	
Image-to-Biomass Estimation CSIRO Problem Statement	2025
Developed a multimodal model combining tabular features with a CNN over imagery to predict vegetation biomass and NDVI, building the full preprocessing-to-evaluation pipeline with regularization to reduce overfitting on a limited dataset.	
EduSage, AI-Assisted Education Platform Academic Project	2024 - 2025
Architected a full-stack education platform (React.js, Node.js, MongoDB) and integrated an LLM-powered module (Gemini API and prompt engineering) into the interview and quiz flow for a more responsive experience.	

AWARDS AND ACHIEVEMENTS

- Received multiple Letters of Recommendation for technical and academic contributions, and ranked among the top performers in the Information Technology branch.
